

# The Talon Metro 100RT

As featured in TRC Magazine's Trackday Car of the Year

## Introduction

The Talon 100RT is a trackday version of our popular 100R model. Whereas the 100R is a road car that is great fun on a track, the 100RT is an out and out track car, that happens to be quite at home on the road as well. The RT has a whole host of new features as standard, including a fully welded 6 point roll-cage, complete with door bars, tied into the bodyshell in 8 additional points. Also standard is an aluminium undertray and rear diffuser that sucks the back of the car down by over an inch at 100mph. This downforce has eliminated the lift off oversteer evident in the prototype. The RT has a lightweight (2.9 Kg) fibreglass bonnet and an even lighter (2.7 Kg) fibreglass tailgate and is fitted with perspex windows all round.

## Standard Specification
